

# Mugen MBX6 buggy skid plates (Home made)

Following imbedded attachment files are DXF drawings of skid plates for the Mugen MBX6 buggy. Includes front & rear chassis skid plates. Make from 2mm aluminium.

Either send them into an engineering shop with CNC cutting facilities (send as separate DXF drawing files) or print out 1:1 on paper (need software to view/print DXF files) and trace onto 2mm aluminium sheet. Drill holes first, you need to countersink holes as well to suit screw heads, then cut with jigsaw using alloy cutting blade.

The front skid plate is made extra long to wrap up & over front bumper, you will need to curve bend this by hand.

You can open DXF files at base of page. Do what you like with the files, you can mass produce parts and sell them if you like, does not worry me. I consider this freeware.

Enjoy
