

4. Proposed by Mark Stiles, Seconded by David Spashett

Amend LMP construction rule 3

Before:

3 Definition of a Modified Motor

3.1 Motors allowed - Open modified. Any motor listed in any of the Electric Board brushless motor lists as updated from time to time.

After:

3 Definition of a Modified Motor

3.1 Motors allowed - Modified. Any motor listed in any of the Electric Board brushless motor lists as updated from time to time. **The minimum wind of the motor will be 6.5 turns with no maximum wind.**

Reason

The Open Modified class has become unsustainable in its current form. The number of entries in this class has declined steadily over recent years, to the extent that we did not have one full heat at either of the final two events of the 2015/2016 season.

Advances in motor, ESC and battery technology have moved the power available in Open Modified beyond the capabilities of all but the very elite to be able to control and race.

Introducing a motor limit is intended to bring about a small reduction in power, making the class more attractive to a wider number of competitors, encouraging them to enter this class, while still being a significant step-up from a 'Stock Spec' class.
