

RECAB RACING

RECAB ENGINES

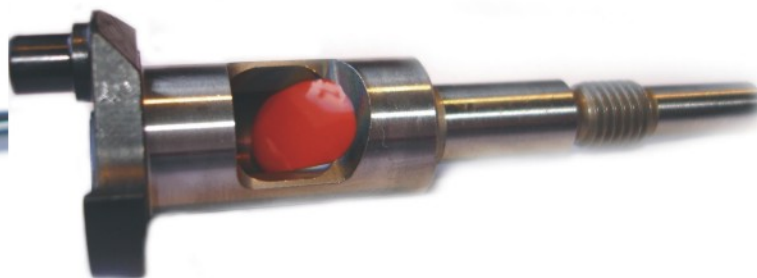

*TO BRING A HIGH REABILITY, THE CRANKSHAFT HAS RECEIVED
A SPECIAL LONG LIFE COATING "RECAB GT BLACK"*

REF:REM 2064 BLK

**MAX-12TZ
(P)-T3**

**THE CRANKSHAFT
HAVE RECEIVED HARD
RECAB COATING
TREATMENT**

LIGHT CRANKSHAFT WITH "RECAB GT BLACK" COATING..

The crankshaft is lightened to reduce its inertia.

The whole is filled with a special red dough which is put to improve the gas passage and to reduce the crankshaft's vibrations at a high r.p.m. So the engine acceleration is improved, and the fuel consumption is lower. With this treatment, the crankshaft pin is almost everlasting, and allows to the engine a higher r.p.m without a risk to damage the connecting rod.
