

NEW Tamiya Touring Car Hop-Up Options!

54729 Racing Wing α (Carbon Pattern)

Availability: Now!

MSRP: \$7.25

For touring car races, it is essential to equip a rear wing that matches the body in terms of styling and down force effect. The racing wing version type "A" offers a stepped wing element design and is made of polycarbonate material. This version of the wing incorporates a carbon fiber pattern for stylistic appearance.

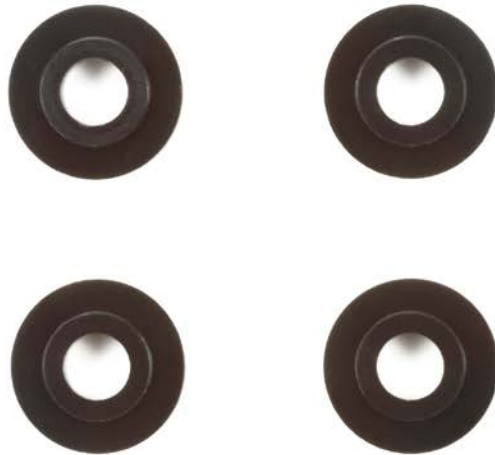

Set Contents:

- Racing Wing A x1
- J Parts (wing stays) x1
- Snap pins and O-rings necessary for attachment are included.
- Wing part has carbon pattern pre-printed.
- Compatible with 1/10 scale car bodies that have space to make attachment holes.

54730 TRF Damper Rod Guide (Hard, 4pcs.)

Availability: Now!

MSRP: \$3.90

The rod guides in this set are made from POM plastic; harder than standard rod guides found in TRF aluminum dampers, they are less prone to warping and offer continued smooth movement with resistance to shock oil leaks. They are for use with the high-performance TRF Damper product range.

- Rod Guide (Hard) x4
- Molded in black POM.
- Compatible with all TRF aluminum dampers.

54740 TA07 D Parts (Suspension Arms, Medium)

Availability: January

MSRP: \$9.00

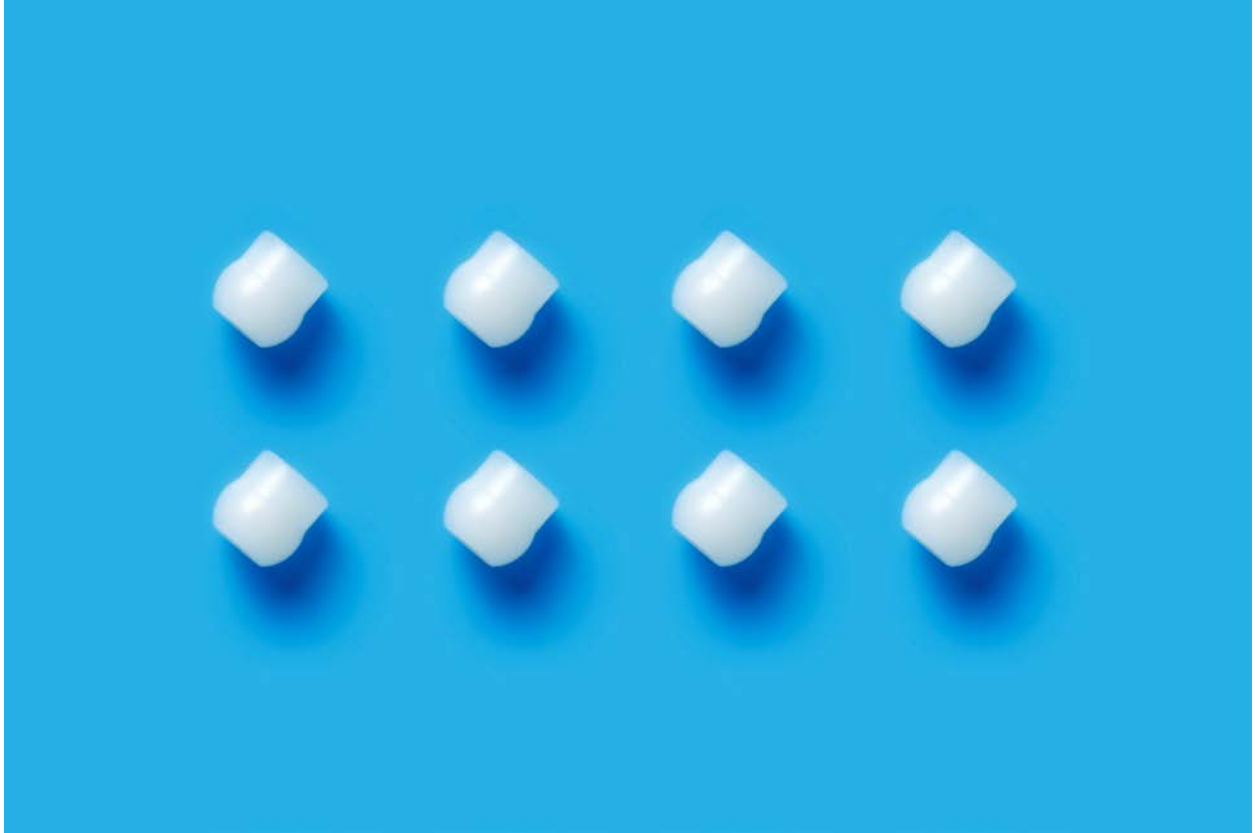

The suspension arm design from the TA07/TRF418/419 come in two different materials; fiberglass reinforced plastic and carbon reinforced plastic. The fiberglass reinforced plastic found in the TA-07 is soft by nature while the carbon reinforced plastic found in the TRF418/419 is harder in nature. The TRF419X was the first kit to introduce a “medium” stiffness material and it is now available for the TA-07 and TRF418/419 suspension A-Arm design. They will help in low traction conditions, giving improved control once fitted onto a TA-07 chassis or TRF418/419 machine.

- TA07 D Parts (Suspension Arms, Medium) x1
- Set comes with one front and one rear arm. You need to packages to complete one car.
- Compatible with cars using TRF418-design suspension arms or Item 54691 TRF419 D Parts (Suspension Arms).

54747 Low Friction Resin 5mm Suspension Ball (8pcs.)

Availability: February 2017

MSRP: \$7.50

These low-friction POM resin suspension balls were originally used on the TRF419X chassis. They are available separately for use on any of Tamiya's vehicles that utilize 5mm suspension balls.

- Low Friction 5mm Suspension Ball x8
- Low friction parts give improved smooth motion of the suspension system.
